

WHAT IS CLAIMED IS

1. An apparatus for transporting animal feed in an aqueous body,

comprising:

5 a. a container, said container having a wall portion forming an open chamber, said wall portion including at least one aperture therethrough to allow aqueous body to said chamber of said container;

10 b. a baffle, said baffle positioned in said chamber of said container to direct animal feed to a selected portion of said chamber;

c. a conduit for guiding the animal feed and aqueous material from said chamber of said container to a predetermined place; and

15 d. a pump for urging the movement of the animal feed and aqueous material from said chamber of said container and through said conduit.

20 2. The apparatus of claim 1 which additionally comprises a guide for adjusting the extension of said baffle into said chamber of said container.

3. The apparatus of claim 2 in which said guide includes at least one track mounted to said container within said chamber of said container.

25 4. The apparatus of claim 3 which further comprises a handle connected to said baffle.

5. The apparatus of claim 1 in which said at least one aperture comprises a plurality of apertures, each of said plurality of apertures passing through said wall portion of said container.

5 6. The apparatus of claim 1 which further comprises means for occluding at least a portion of said one aperture.

7. The apparatus of claim 6 which additionally comprises a guide for adjusting the extension of said baffle into said chamber of said container.

10 8. The apparatus of claim 7 in which said guide includes at least one track mounted to said container within said chamber of said container.

9. The apparatus of claim 8 which further comprises a handle connected to said baffle.

15 10. The apparatus of claim 6 in which said at least one aperture comprises a plurality of apertures, each of said plurality of apertures passing through said wall portion of said container.

20 11. The apparatus of claim 6 in which said means for occluding at least a portion of said one aperture comprises a plate and a bracket, said bracket slidably engaging said plate.

12. The apparatus of claim 11 which further includes means for fixing said bracket to the exterior of said container.
